Education

M.S. in Artificial Intelligence & Data Science

2025 – 2027

Atal Bihari Vajpayee Indian Institute of Information Technology and Management (ABV-IIITM), Gwalior
CGPA (Semester 1): 9.32

Skills

Programming: C, C++, Python, SQL

Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn

Machine Learning: Regression, Classification, Clustering, Model Evaluation

Data Analysis: EDA, Data Cleaning, Feature Engineering, Data Visualization

Tools: Git, GitHub, Jupyter Notebook, VS Code

Achievements

- Solved 32 DSA problems on LeetCode (Arrays, Strings, Sliding Window, Prefix Sum, Recursion).
- Maintained a public DSA learning repository in C++ — GitHub.

Projects

Human-Relatedness Embedding

Python, GloVe, NumPy, Pandas, Scikit-learn

- Evaluated how well word embeddings align with human semantic judgments using **SimLex-999** and **MEN** datasets.
- Computed cosine similarity across **GloVe embeddings (50D–300D)** and measured alignment using **Pearson correlation** and **R^2** .
- Achieved best results on MEN dataset: **correlation = 0.74** and **$R^2 = 0.55$** (300D), showing strong relatedness alignment.
- GitHub: Human-Relatedness-embedding

Insurance Data Analysis & ML Modeling

Python, Pandas, Scikit-learn

- Performed EDA on insurance dataset and analyzed the impact of **age**, **BMI**, **smoking status**, and **region** on insurance charges.
- Applied preprocessing including **label encoding** and **one-hot encoding** for categorical variables.
- Built baseline models and evaluated:
 - **Linear Regression:** $R^2 = 0.784$ for predicting charges.
 - **Logistic Regression:** Accuracy = 0.966 for classification task.
